

4 RELAY DECODER

- press the button once shortly
- now the first output is active (LED1 flashes, Relay1 clicks), enter address on your hand controller and let it move as an accessory (*Lenz controller: choose as an accessory address and press the „+” or „-” button*)
- now the second output is active (LED2 flashes, Relay2 clicks), continue as you did at the first output
- continue the next outputs
- if you wish you can add one address to all outputs
- recommended power supply: 15-18V/DC or 12-15V/AC - 500mA

Be careful if you are using 230V on relays!
The maximum load of each relay is 230V/8A.
