

PLATFORM MODULE

- this module displays the destination, stations, and departure time
- 6 different routes are set
- type and name of the train (max 15 characters)
- name of the final destination (max 15 characters)
- scrolling route with the name of cities
- platform number
- time (hh:mm:ss)
- power supply: 8-10V AC / 10-15V DC
- time module with CR2032 battery to backup time included
- 128x32 OLED screen included
- input for a switch (route selection)
- input for a pushbutton (train selection)
- integrated pushbutton (route selection)
- 5V output for universal use (max. 500 mA)

Description:

After the power supply is connected, the display shows the first train information. Pressing the integrated button (or using an external button) you can choose another train.

By the external switch, you can switch the display between time or train information.

Short 0 (GND) with S1 to choose another train.

Short 0 (GND) with S2 to display time.

More OLED displays can be also used, however, all displays will show the same information.

The display must be the same type!
